

Convergence CT's Biostatistics Services and SAS Training

Biostatistics is a key element of market analysis and epidemiology research projects, and needs to be handled with expertise and attention to detail; at every stage of research, timely, accurate data is integral to success. Convergence CT intelligently applies its extensive experience, comprehensive scientific capabilities, and state-of-the-art technology to bring outstanding bioanalytic support to your research.

Convergence CT takes the time to understand your specific requirements, and provides an exceptional level of products and services to meet your goals. We have the scientific expertise, technology, and management skills to deliver outstanding data to support your research throughout every phase.

We supply high quality, insightful deliverables within specified timelines on every project we assist you with – be it small or large, simple or complex.

Whether you require our services as an integral part of a full analysis program, or as standalone consulting or training services, CONVERGENCE CT's biostatisticians, consultants, and trainers can quickly step in to become an important part of your team, making significant contributions to your projects.

Biostatistical Consulting

Many companies can offer statistical analysis and reporting. However, you may have specialized needs that go beyond these requirements. CONVERGENCE CT's extensive pharma experience make us an excellent choice for biostatistical and SAS programming consulting, with our experienced consultants motivated and focused on your specific needs and timelines. We offer knowledgeable advice ranging from individual analysis to complete program management.

Project Analysis Services

In addition to our state-of-the-art technology, we offer proven management processes and have fully integrated information technology in place to plan your project effectively, track all intermediate steps, and deliver on-time results. At Convergence CT, we are dedicated to a fully integrated team approach. Your project benefits from a continuum of expertise: from method development through operations to results reporting.

With a team of more than 100 professionals across the globe consisting of programmers, program designers, consultants, and project managers, we can provide you with

an expert, or group of experts, depending on your requirements. Our staff draws on vast stores of knowledge in biostatistics, chemistry, biochemistry, analytical chemistry, immunochemistry, biological sciences, pharmacology, and toxicology. The combined diversity of backgrounds and experience gives us unique capabilities in the development of highly sensitive and robust assays. You can be confident that your projects will get individual and highest level of competence, attention, and detail.

All design, analysis and reporting is based on ICH guidelines, client needs, and our own extensive procedures. Rigorous QC methods are employed at all stages.

Training – Biostatics for Statisticians

Tailored SAS Training for Pharmaceutical Companies

Each course is designed to meet the specific needs of the user. Experience levels can vary from new users of SAS to those with several years of experience. Convergence CT tailors the course material to the experience level and type of analysis needed; market analysis, drug competitive analysis, patient care setting treatment patterns, physician medical specialty prescription patterns, etc.

If your department has marketing analysts that are using SAS, then Convergence CT can help them gain a higher degree of proficiency resulting in better productivity and more insightful analysis.
